

Statistics

Published: 26.06.2020.

National Centre for education each year gathers and descriptively analyzes all the state exam or test results. In general, are summarized in more than 90 thousand results from centralized exams and more than 100 thousand cases from not centralized exams (grade 3, 6, 9, and some 12).

National tests or exams in descriptive analysis provides to any person interested in the student achievement trends on state, local or school level. The provided information ensures the accuracy and arranged for further data processing capabilities to perform in-depth (secondary) analysis of specific areas.

Annual statistical reports include data of student's achievement frequencies, central tendency and correlation of data. Crucial data (for instance English, Math or Latvian) is provided on also on school level. Also Centre provides SPSS/PASW complete dataset for professional researchers and social science students.
